

Why we exist

The chemical industry is the most important industrial sector in the Rhineland-Palatinate.

It includes small, medium and large companies, which are active in domestic and international markets. Their main activities are research and development, production as well as sales and marketing.

The Chemical Industries Association contributes to sustaining and developing the Rhineland-Palatinate as a key location for chemical companies.

Guiding Principles

Chemical Industries Association,
the Rhineland-Palatinate, Germany

Date of issue: February 2006

Fundamentals

Our aim is to provide a service for the benefit of our members.

We are committed to representing their economic and socio-political interests vis-à-vis policy-makers, the state and the general public.

Our member companies' decision-makers guide our actions.

Our role

We ...

- provide guidance and information
- provide legal protection
- formulate working and commercial conditions
- make collective wage agreements
- involve ourselves actively in political decision-making
- comment on legislative proposals
- get involved with training and qualifications
- organise workshops for our members and encourage them to share experience

How we work

We focus on the current and future needs of our member companies. Our employees are approachable and recognised as experts in their field.

We deliver a professional presentation of the facts via our public relations activities. We provide direct, quick and up-to-the-minute information. Engagement with our target groups is essential for us.

We maintain a constructive partnership for the common good with the trade unions.

We actively encourage young people to choose a career in the chemical industry.
